

Legal Contract Retrieval Test Dataset

Designed specifically to test BM25 keyword search, semantic/vector search, and Hybrid Search with RRF in a RAG application.

How to use: Ingest this PDF into your Streamlit + ChromaDB RAG application. Run the test questions at the end and compare BM25-only, vector-only, and hybrid results.

1. Master Service Agreement

Section 4.2 — Payment Terms. The Customer shall pay each undisputed invoice within thirty (30) calendar days from the invoice date. Late payments may incur interest at 1.5% per month, subject to applicable law.

Section 7.3 — Force Majeure. Neither party shall be liable for delay or failure caused by events beyond its reasonable control, including natural disasters, war, government action, widespread network outages, or similar events.

Section 8.2 — Termination. Either party may terminate this Agreement for convenience by providing sixty (60) days' written notice to the other party.

Section 10.1 — Confidential Information. Each party shall protect non-public business, technical, financial, customer, and security information received from the other party and shall use such information only for purposes of this Agreement.

Section 11.4 — Intellectual Property. Pre-existing intellectual property remains owned by the party that supplied it. Project-specific deliverables created and paid for by the Customer shall be assigned to the Customer after full payment, unless the applicable Statement of Work states otherwise.

2. Amendment No. 1

Amendment 1, Section 2 — Replacement of Section 8.2. The sixty (60) day termination notice in Section 8.2 of the Master Service Agreement is replaced with thirty (30) days' written notice.

Amendment 1, Section 3 — Payment. Section 4.2 is amended so that undisputed invoices are payable within forty-five (45) calendar days instead of thirty (30) calendar days.

3. Amendment No. 2

Amendment 2, Section 1 — Termination Notice. The termination notice period specified in Amendment No. 1 is replaced with fifteen (15) days' written notice. This amendment controls in the event of conflict with earlier termination provisions.

Amendment 2, Section 2 — Payment Reference. The forty-five (45) day payment period introduced by Amendment No. 1 remains unchanged.

4. Statement of Work — Project Atlas

SOW-ATLAS-2026-01. The supplier will deliver data migration, API integration, automated testing, and deployment support. Milestone invoices are issued after acceptance of each milestone.

Acceptance. The Customer has ten (10) business days to report material defects after delivery. Silence after that period constitutes acceptance unless the parties agree otherwise in writing.

5. Retrieval Challenge Cases

These examples are intentionally designed so that keyword and semantic retrieval behave differently.

Test Query	Expected Strength	Why
What does Section 8.2 say?	BM25	Exact section identifier and exact wording.
What is the current cancellation notice period?	Semantic+ Hybrid	The document uses 'termination', while the query uses 'cancellation'.
How long does the customer have to pay an undisputed bill?	Semantic+ Hybrid	The contract says 'invoice' and 'payable'; the query uses 'bill'.
What is the payment deadline in Amendment 1?	BM25+ Hybrid	Exact amendment reference plus payment concept.
Which amendment changed the termination notice?	BM25+ Hybrid	Exact phrase 'Amendment' and termination terminology.
What happens during an uncontrollable event like natural disaster?	Semantic+ Hybrid	Tests conceptual similarity to Force Majeure.
What is SOW-ATLAS-2026-01?	BM25	Exact identifier.
Who owns work created specifically for the customer?	Semantic	Tests paraphrase of intellectual-property ownership language.
How much time is allowed for defect reporting?	Semantic	Query paraphrases the acceptance clause.

6. Recommended RAG Experiment

Run each query three ways: (1) BM25 only, (2) ChromaDB vector search only, and (3) Hybrid = BM25 + vector retrieval + RRF. For each method, inspect the top 5 or top 10 chunks before the LLM sees them. This makes it possible to determine whether a failure came from keyword retrieval, semantic retrieval, fusion, or generation.

Expected pattern: BM25 should be strongest for exact identifiers such as Section 8.2 and SOW-ATLAS-2026-01. Vector search should be stronger for paraphrases such as 'cancellation notice' versus 'termination notice'. Hybrid retrieval should recover relevant chunks from both categories. This reflects the standard motivation for hybrid retrieval: BM25 provides lexical exactness while dense retrieval provides semantic generalization. ■cite■turn0search0■turn0search7■
